

7. Search results: Useful pointers

Useful pointers on pollutant loads search results

Thru.de lets you see both aggregate and industry-specific search results.

For example, if you choose the medium "Air" when doing a search and select "Pollutant loads" for the presentation of results, you will see both the total load per pollutant group and, by expanding the "Pollutants" box, a detail display of which pollutant makes up how much of total pollutant load.

Useful pointers on waste volume search results

Thru.de lets you see both aggregate and industry-specific search results.

For example, if you select both "Hazardous wastes" and "Non-hazardous waste" under the "Waste" heading and click on "Waste amounts" for the presentation of results, you will get two columns of results which you can view alternately by switching back and forth. The current display of results is shown by the dark-shaded button. The results page shows total amounts in tonnes/year and the proportions of total amounts that were either recycled or disposed of. The last line shows the total amount of all or only the selected industry sectors. By expanding the "inside/outside of the country" box when you are on the "Hazardous waste" results page, you will find information about the shares of waste which were recycled or disposed of in Germany and abroad. All figures are rounded off to three significant digits.
